

Cartrabbit Learning Framework - WordPress

A flexible learning and onboarding framework for incoming engineers at Cartrabbit.

Duration: 4 weeks

Requirements

1. Linux or MacOS operating system. If you are on Windows, it's time to say goodbye. Trust us. Windows is the biggest enemy when it comes to being a programmer. It not only lacks tools, it is slow and cumbersome to work with. So ditch Windows and install Ubuntu. It is mandatory. Not optional
2. Terminal is your God. You'll thank us once you learnt to use Terminal
3. VSCode - surprisingly, a good product from MS
4. Github Account (You need to create private repos only during the internship). You should commit your code at least 4 times during a day (It's ok if you did not complete it)
5. Github Projects (You should create a project for yourself in github, add tasks, finish tasks and everything. You need to keep a record of whatever you are doing in the github projects)
6. Zoom - conference calls, meetings happen over Zoom

Week 1: Unlearn

Most of our learning (especially in India) is adhoc. It is not deep enough, lacks structure & not scalable. So we have to unlearn first, empty our minds and begin from scratch.

1. **Coding Standards:**
Learn how to code cleanly. <https://github.com/jupeter/clean-code-php> (You should be through about these standards)
2. **Twelve Factor :**
Learn how to properly develop a flexible, scalable apps using this framework.
<https://12factor.net/>

3. Docker

Learn how to install docker and use it for effective development.

<https://developer.yoast.com/blog/set-up-wordpress-development-environment-in-docker/>

<https://blog.devgenius.io/how-to-start-wordpress-plugin-development-with-docker-part-1-docker-and-admin-panel-6ac9673c9a22>

4. WordPress Plugin Development Intro -

<https://www.youtube.com/watch?v=ezkSNJtCBUc>

<https://www.youtube.com/watch?v=Z7QfH-s-15s>

<https://www.youtube.com/watch?v=O79pJ7qXwoE>

5. WordPress Plugin boilerplate

<https://wppb.me/>

Week 1: Test & Presentation (not PPT)

You need to make a presentation and a demo on how to develop a wordpress plugin at the end of the week.

You should present, write the code, explain all the steps, show to work with docker for plugin development. Almost everything.

This will happen at the Conference hall. It will be attended by all other developers, your team leader and your CEO too.

Duration: 45 minutes

Week 2: WordPress Plugin Development

1. Best Practices in plugin development -

<https://developer.wordpress.org/coding-standards/>

2. Hooks - Actions & Filters

<https://developer.wordpress.org/plugins/plugin-basics/>

<https://developer.wordpress.org/plugins/hooks/>

<https://www.hostinger.in/tutorials/what-are-wordpress-hooks/>

<https://www.youtube.com/watch?v=9GuJi8dYuAs>

3. Plugin Security - <https://developer.wordpress.org/plugins/security/>
Data sanitisation, Escaping, User capabilities and more
4. Menus - <https://developer.wordpress.org/plugins/administration-menus/>
5. Short codes - <https://developer.wordpress.org/plugins/shortcodes/>
6. Settings / Option API - <https://developer.wordpress.org/plugins/settings/>

Week 2: Task / Presentation

1. Create a plugin to override the default mail sending and use Sendgrid instead
2. Create a plugin to automatically delete the “draft posts” everyday at 10 am.

Week 3: WooCommerce

1. Learn what is WooCommerce and its concepts:
<https://www.youtube.com/watch?v=oTr--KR4qoM>
<https://www.youtube.com/watch?v=Txg-PrWRdzs>
2. WooCommerce Plugin development
<https://developer.woocommerce.com/extension-developer-guide/>
https://www.youtube.com/watch?v=J1-jypWrOlc&list=PLyIQxnm2NIhWyGx_hYJSiRmsjA_kntR29Y

Week 3: Task / Presentation

1. Create a WooCommerce plugin to show “Frequently Bought Together products” in the product page. Like how Amazon shows “People also bought these together”. It should show a button to add all the recommended products together to the cart in a single click
Example:
<https://www.dropbox.com/s/562anywhbrhjd5g/Screenshot%202022-02-28%20at%2012.17.53%20PM.png?dl=0>
<https://www.dropbox.com/s/zkg6gmtriyesjgt/Screenshot%202022-02-28%20at%2012.16.33%20PM.png?dl=0>
2. Create a WooCommerce plugin for this use case: When customer purchases Product A, he gets another Product A as free. (Buy X Get X). The store owner should be able to

configure this offer at the product creation page itself

3. Create a WooCommerce plugin to Auto Apply Custom Coupon code in cart page.

Week 4: REST API

1. Learn the basics of Rest API offered by WordPress
<https://kinsta.com/blog/wordpress-rest-api/>
<https://developer.wordpress.org/rest-api/>
2. WooCommerce REST API
<https://www.cloudways.com/blog/custom-dashboard-using-woocommerce-php-rest-api/>
<https://www.youtube.com/watch?v=ESugG-wgNSI>
<https://hevodata.com/learn/woocommerce-rest-apis/>
<https://woocommerce.github.io/code-reference/index.html>
<https://woocommerce.github.io/code-reference/hooks/hooks.html>
<https://woocommerce.github.io/woocommerce-rest-api-docs/#introduction>

Week 4: Task / Presentation

1. Create an application (either core PHP or Laravel) to fetch Woocommerce Products via the REST API and display them
2. Create an application to automatically update the inventory when a product stock goes below 10. The application should frequently check the inventory status using the REST API and then update
